Benefits from Archive in the Cloud

- Cost savings for storage of Big Data?
- Avoid data downloading and local data mgmt

- Alaska Satellite Facility Web Object Storage prototype
  - Distribute Sentinel radar data from Amazon storage
- Global Imagery Browse Service in the Cloud
- Ingest and Archive management prototype
Cloud Analytics Prototypes

Benefits from Cloud Analytics

- Analyze data at scale
- Analyze datasets together easily
- Avoid data downloading and local mgmt

Analysis support toolbox to attract users to cloud analytics

- Community open source tools
- DAAC-developed tools
- Cloud analytics examples and recipes
- Initial cross-DAAC proof of concept in progress based on Python + Jupyter Hub
1. Vendor Lock-in
2. Future storage costs
3. Uncapped egress costs
4. Security Restrictions
5. Network trust

Data Formats

● Self-Describing API-Based
  ▪ Hierarchical Data Format (HDF)
  ▪ network Common Data Form (netCDF)

● Additional conventions
  ▪ HDF-EOS
  ▪ Climate-Forecast coordinates

● Other Standards
  ▪ Gridded Binary (GRIB)
  ▪ ICARTT (Airborne)

● Binary

● ASCII
Solutions to the Variety Problem

1. Interoperable discipline-focused DAACs
2. Common Metadata Repository
3. OPeNDAP* data services
4. Community engagement

*Open-source Project for a Network Data Access Protocol
Discipline-Focused Distributed Active Archive Centers (DAACs)

- Alaska Satellite Facility (Synthetic Aperture Radar)
- National Snow and Ice Data Center DAAC
- Land Processes DAAC
- Socio-economic Data Archive Center
- Crustal Dynamics Data and Information System
- Ocean Biology DAAC
- Level 1 and Atmosphere Archive and Distribution System (MODIS)
- Oak Ridge National Laboratories DAAC (Biogeochemistry)
- Global Hydrology Resource Center
- Atmospheric Sciences Data Center
- Goddard Earth Sciences Data and Information Service Center
- Physical Oceanography DAAC
Different DAACs have different “-Spheres of Influence”

The Common Metadata Repository presents a consistent catalog for discovery of data from multiple DAACs.

One Metadata System to rule them all,
One Metadata System to find them,
One Metadata System to bring them all
And in cyberspace bind them
OPeNDAP

● Open-source Project for a Network Data Access Protocol
● High-performance network access protocol for complex science data
● Well-supported in Earth science community tools
  ◦ Free: Panoply, IDV, McIDAS-V, nco,…
  ◦ Commercial: ArcGIS, Matlab, IDL,…
OPeNDAP* access to data smoothes out format heterogeneity and supports subsetting

*Although the Hyrax implementation is shown, other OPeNDAP servers such as GrADS Data Server and THREDDS Data Server have similar capabilities but different architectures.
Data transformation applies fundamental changes and conversions to attributes of the original data to suit the application requirements of end-users.

Data transformation options of several kinds can help with Variety and Volume

Community Engagement on Big Data

- **Earth Science Information Partners (ESIP)**
  - Variety: Clusters on Discovery, Information Quality
  - Volume: Clusters on Earth Science Data Analytics and Cloud Computing

- **Earth Science Data Systems Working Groups**
  - Formed of DAACs, ACCESS and MEaSUREs award winners
  - Variety: Working Groups on Dataset Interoperability, Search Relevancy
  - Volume: OPeNDAP Best Practices, Cloud Computing

- **User Needs efforts**
  - DAAC User Working Groups
  - American Customer Satisfaction Index survey
  - EOSDIS User Needs Analysis group
Big-Data-Community Engagement

- Big Data Theme for both ESIP 2016 Meetings
- Co-Convening AGU 2016 session on Big Data Analytics
- Program committee for IEEE Workshop on Big Data in Earth and Planetary Sciences
- ESA’s Big Data from Space (BiDS) workshops
  - “Improving Earth Science Data Discoverability And Use Through Metadata Relationship Graphs, Virtual Collections, And Search Relevancy”
User Needs from Community Sources

- ACSI Survey Scores
- ACSI Survey Comments
- Applications Workshops
- Advisory Groups (ASAC, UWG)

Backup Slides
OPeNDAP Enhancements from the Big Earth Data Initiative

- More OPeNDAP for EOSDIS data
- More aggregation along time for data in OPeNDAP
  - Improved performance for aggregation in Hyrax
