

# Total Solar Eclipse 2016 Webcast Live from Indonesia Supported by NASA Heliophysics

The Exploratorium presented a real-time webcast of the total solar eclipse on Mar 8-9 from Micronesia. A production crew was sent thousands of miles by plane and boat —to the coral island of Woleai, in the Pacific Ocean, 500 miles north of New Guinea — to webcast this astronomical event.

The webcast was recorded live March 8, 5:00–6:15 p.m. PST. **The program includes commentary by Exploratorium educators and NASA heliophysics scientists from Goddard Space Flight Center.**

Here is the archive of the live program, complete with a spectacular eclipse!

<http://www.Exploratorium.edu/eclipse/video/live-webcast-2016>

- Exploratorium also produced the first Spanish language live narration of the eclipse event in partnership with Univision.
- Partner museums, libraries, and other institutions both nationally and internationally used the feed.

The web streams of NASA TV peaked at about 21,700 by the end of totality; 13,600 were on the program, the remainder on the raw telescope feed. [For comparison, astronaut Scott Kelly's return to Earth last week peaked at about 40,000. ]
