

Taking Kite Science to New Heights

Throughout the months of March and April a dedicated group of six community college students in the calculus-based physics course at Southwestern Community College in Sylva, NC worked to model the ascent rate of a 7' Alpine DC kite, culminating with the presentation of their findings at Southwestern Community College's spring science symposium on April 25th, 2018.

This nugget was supported by the joint efforts of the Smoky Mountains STEM Collaborative (SMSC) and the AREN Project.
