

# Student Production Teams Produce NASA eClips™ Spotlight Videos in Summer Workshop

July 17-19, 2017, educators and staff from the NASA eClips™ team facilitated learning for seven local high school students using the engineering design process to produce Spotlight videos. Student production teams spent 3 days researching, storyboarding, writing scripts, filming and receiving feedback from the NASA 360 team, Elizabeth Joyner from SMD at NASA Langley MyNASAData, several teachers from Hampton City Schools, and Suzanne Zaremski of NIA. Once the Spotlight videos are approved by NASA headquarters, they will become part of an interactive lesson plan and made available on the NASA eClips™ website.
